Report from April 2009, Sally Ellison

The LAA Health & Well Being Steering Group is responsible for ensuring that the health targets within the LAA are being achieved and ensuring that all partners are fully engaged with the process. At its recent meeting the group looked at NI 121, NI 123 & NI 8. These are just 3 of the 35 indicators for Worcestershire and it is important that VCS organisations are aware of this work and develop links with partners if any of their activities help to achieve the targets that have been set for each indicator.

If anyone would like more information about this work, then the Worcestershire Partnership website has plenty of information and Jennifer Springer, who works for the Partnership and is based at County Hall, would also be able to provide further information. In addition, as part of the WIC activity in Representation & Engagement, Jim has 'mapped' the VCS representatives on all the County theme groups and this information is available on the WIC website so it is important that VCS organisations find out who their representative in a particular field is and makes contact with them so as to ensure that they are able to promote VCS activity at Theme group meetings.
